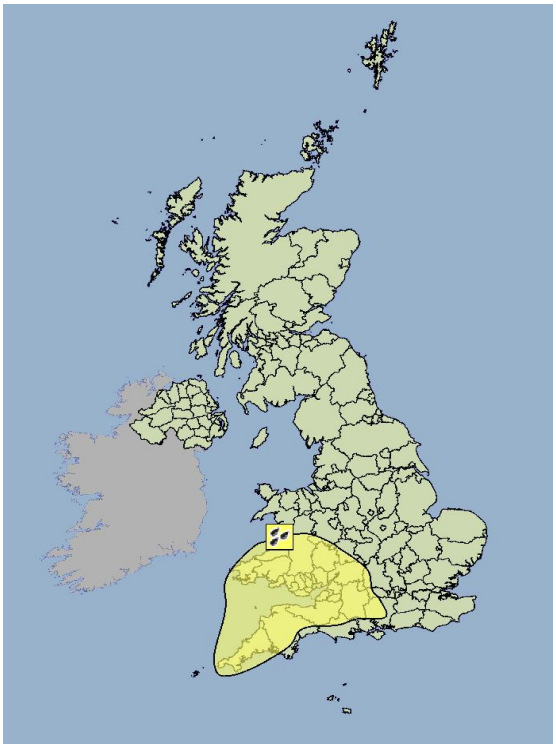
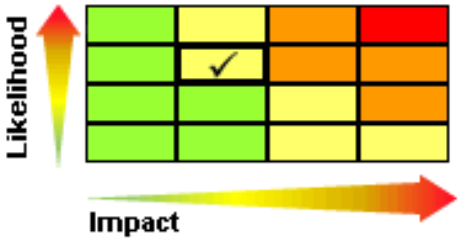
National Severe Weather Warning Service





Chief Forecasters Assessment
Showers will clear away to the northwest this morning, with the cloud continuing to break to allow some sunshine. This in turn will allow the temperature to rise sufficiently to trigger shower development through the afternoon, with some becoming heavy, thundery and slow moving, for example over parts of southwest England. Hail is also possible in some of the showers. The heaviest showers and thunderstorms could produce 20 mm of rain within an hour.

The Met Office have issued a **Yellow Warning** of **Rain**

Valid from **13:00 on Fri, 27th May 2016** until **23:00 on Fri, 27th May 2016**

Many places will be dry this afternoon, although scattered heavy showers and thunderstorms will develop and continue through the evening in places, so be aware of the potential for localised surface water flooding.
